

REACT NATIVE

ORDER & SALES MANAGEMENT APP

Create It. Approve It. Dispatch It.

<https://oma-order-sales-app>

I INTRODUCTION

Traditional field sales workflows rely on notebooks, Tally ERP checks, phone calls, and printed dispatch lists. This causes duplicate data entry, approval delays, weak status visibility, and no real-time business intelligence.

A ABSTRACT

This project builds a React Native mobile app for small-to-medium distributors. Sales reps create orders instantly, managers approve with embedded ledger visibility, and warehouse staff process dispatch through a connected digital flow.

O OBJECTIVES

- ✓ Eliminate duplicate notebook-to-Tally order entry.
- ✓ Create mobile sales orders in under 60 seconds.
- ✓ Reduce manager approval time with ledger context.
- ✓ Track status from pending approval to dispatch.
- ✓ Provide analytics for revenue, orders, and collections.

T TECHNOLOGY / METHODS / ALGORITHM

Stack

- RN React Native + Expo
- TS TypeScript
- API Node.js + Express.js
- DB Google Sheets API
- UX Expo Router + Context
- CH react-native-svg charts

Methods

- ✓ Requirement analysis and planning
- ✓ Design thinking and empathy mapping
- ✓ Role-based frontend development
- ✓ REST API and Sheets integration
- ✓ Prototype testing with realistic demo data

Algorithm / Logic

- ✓ Login -> role dashboard
- ✓ Create order -> save through API
- ✓ Manager approval -> ledger review
- ✓ Dispatch -> timestamp update
- ✓ Analytics -> revenue and pipeline visibility

P PROTOTYPE

W WORKFLOW / PROCESS / FLOW CHART

R RESULTS / OUTCOME

- ✓ Full Create -> Approve -> Dispatch workflow demonstrated.
- ✓ Order creation target reduced to under 60 seconds.
- ✓ Approval target reduced with embedded ledger data.
- ✓ Sheets-backed demo validates realistic records.
- ✓ Managers receive analytics for revenue and pipeline.

C CONCLUSION

The React Native Order & Sales Management App delivers a modern mobile-first solution for Tally-based field sales workflows. It removes duplicate data entry, improves credit-check decisions, creates digital dispatch records, and gives managers real-time business visibility through an integrated prototype.

F FUTURE SCOPE

- ✓ JWT-based authentication and stronger backend validation.
- ✓ Push notifications for approvals and dispatch updates.
- ✓ Offline synchronization for low-network field visits.
- ✓ Tally ERP CSV import/export pipeline.
- ✓ Barcode scanning and voice notes for faster order entry.
- ✓ Date-range filters and deeper owner analytics.
